

VetStem Cell Therapy **Feline Renal Disease**

Is your cat suffering from kidney disease? You're not alone. Feline renal disease is more common than you may think. In fact, chronic kidney disease (CKD) is a major cause of sickness and death in cats and unfortunately, the only definitive treatment is a surgical kidney transplant. But there may be another option...

VetStem Regenerative Cell Therapy

may be a treatment option for your cat with CKD.

Data from 40 cats with CKD treated with VetStem Cell Therapy showed improved renal blood values.

In an effort to collect more data, VetStem is conducting a clinical research program to study the effects of VetStem Cell Therapy on cats with kidney disease. Could your cat benefit from stem cells?

Speak to your veterinarian to determine if your cat is eligible!

VetStem Cell Therapy ***Feline Renal Disease***

Trinity was successfully treated for renal disease with VetStem Regenerative Cell Therapy

Trinity is a Ragdoll cat who, at approximately twelve years old, was diagnosed with renal failure. She had several symptoms including vomiting, not eating, lethargy, weakness, and weight loss. She was uninterested and spent a lot of time hiding. Her mom worked with several vets to find an effective treatment protocol for Trinity, but she continued to feel bad and her blood kidney values kept going up.

Her veterinarian recommended treatment with VetStem Cell Therapy. Trinity received two intravenous injections of her own stem cells approximately two weeks apart.

After stem cell therapy, Trinity's owner maintained the previous treatment protocol with fluids and medications. Several months later, Trinity's bloodwork showed no signs of kidney disease. Her owner continued the treatment protocol and Trinity remained healthy, started eating again, and gained back all the weight she lost and more. Her owner stated, "I'm so thankful that I've been able to spend so many more years with Trinity. She is a continuous blessing in my life and as you can see from the picture, still shows up to work every day at my home office."
